Data Sheet:
MPLS VPN

Easynet's MPLS VPN service will enable your organisation to operate efficiently in an ever changing and highly distributed environment, whilst minimising the costs associated with network communications.

Easynet's MPLS VPN services enable you to securely exchange information across different sites, support remote access to IT applications, and provide secure Internet break-out and hybrid MPLS/Internet solutions if required – making information available whenever and wherever it's needed.

What is it?

Easynet's service enables you to link multiple global sites in order to send and receive voice, data, video and multimedia traffic via a single platform, all delivered and managed by a single supplier.

Whether it's lead time, price points, SLAs, diversity or product availability that's important to you, our carrier integration model allows you to choose the technology, network, and products for each individual location across your network. In doing so we can provide the best solution to fit your needs for any of these sites.

As your needs change we can offer you the flexibility to evolve your design, including taking advantage of the latest technologies as soon as they become available.

Key benefits

- **Wide range of site access types and resilience options:** Deploy a network design that best fits your business needs in terms of performance, reliability and cost.

- **Multiple classes of service:** Ensures the performance of specific application classes through packet prioritisation.

- **Online portal management tools:** Increase your control and visibility with access to a range of tools that cover service performance, inventory, billing, order and fault management.

- **Hybrid WAN solutions:** Our expertise in deploying hybrid MPLS and Internet environments ensures that private and secure public connectivity can coexist to extend reach, increase resilience, and address the growing requirements driven by the use of public cloud services.

- **Fully managed 24x7:** Proactive monitoring and maintenance of the service enables faster resolution times for changes and fault repairs.

CONNECTING YOUR BUSINESS

MPLS VPN

Why Easynet?

We apply our neutral stance, knowledge and experience, in order to recommend the most appropriate connectivity options available in a particular geography so that we can create the best value network solution for your sites. Plus our services are fully monitored and managed by us around the clock allowing us to offer comprehensive support as and when you need it.

Technical specifications

Global Internet Access:

- **xDSL:** • ADSL, SDSL, VDSL/FTTC, FTTP
  • Bonded ADSL, SDSL and VDSL

- **Ethernet:** • Ethernet over FTTC
  • EFM
  • Fibre Leased Lines (Ethernet over Fibre)

- Includes a range of shared and dedicated bandwidth options from multiple carrie

- **Geographic coverage:** Connectivity in 190 countries.

- **Network monitoring:** Portal based applications provide visibility of the performance and health of each site

- **Service Level Agreement (SLA):** Varying levels of SLA are provided dependent on the underlying technology

- **Remote access:** Optional IPSec and SSL VPN services available for secure remote user access.

- **Centralised Internet access:** Highly scalable breakout to the Internet from 1Mbps to 1000Mbps; Access security provided via Easynet Secure Internet Gateway services

The Easynet Product Portfolio

MPLS VPN is just one of the solutions offered as part of our portfolio of services.

Easynet is a leading global managed service provider with over twenty years' experience.

In addition to our Network solutions, our services include:

- Voice
- Unified Communications
- Application Performance Management
- Security
- Cloud
